

TRIBECA ALPHA PLUS FACT SHEET

The Tribeca Alpha Plus Fund – Class A Units is a long/short equity strategy that enables investors to benefit from rising and falling markets.

ABOUT THE FUND

Investment objective

The Fund aims to achieve positive returns in excess of the S&P/ASX-200 Accumulation Index, before fees and expenses, over the long term by taking both long positions and short positions in selected Australian shares.

Investment strategy

A long/short equity strategy aims to provide investors with positive returns, whatever the market conditions. It seeks to profit from share price appreciation above the index in its long positions and price declines below the index in its short positions.

The Fund has an alpha target of 5-6%, a common target among concentrated funds. What makes this Fund different to those with a similar alpha target is its diversified portfolio, which holds, on average:

- > 60-70 long positions
- > 30-40 short positions

Stocks with weak investment characteristics are short sold, and the proceeds are reinvested in long positions in preferred stocks.

INVESTMENT APPROACH

The Fund uniquely blends fundamental and quantitative strategies to identify investment opportunities and generate returns above its benchmark, the S&P/ASX-200 Accumulation Index.

The quantitative process is designed to exploit particular behavioural biases that are exhibited by investors and can be measured through precisely defined factors. These factors generally fall into the categories of either value or momentum and can be objectively implemented to drive returns.

BUY/SELL SPREAD	BUY +0.30% / SELL -0.30%

How is this Fund different to traditional Australian equity funds?

Traditional Australian equity funds are 'long only' – they buy shares in Australian companies. The Fund differs because:

- > It offers access to a broader investment opportunity set in Australian equities than a long only fund
- > It has the potential for higher levels of performance of the portfolio relative to the benchmark than long only funds
- > If the investment manager believes a company is overpriced or unlikely to prosper due to structural, economic or company-specific factors, they can 'go short' and sell its shares; it can take advantage of negative views of stocks and sectors, as well as weaker fundamentals
- > During periods of market volatility, long only strategies such as traditional equity funds and equity ETFs will follow the respective equity markets; this may result in investors losing a considerable amount of their capital, particularly in the case of a significant bear market
- > Long only funds tend to be benchmark driven and therefore skewed toward Australia's largest companies; just 20 companies comprise approximately 55% of the market capitalisation of the S&P/ASX-200 Index
- > The Fund has a similar alpha target to concentrated Australian equity funds; however, with 100+ stocks versus an average of 30, it offers much greater portfolio diversification than a typical concentrated fund.
